DATA SHEET

Type 8098
FLOWave

FLOWave SAW flowmeter

- No obstacles inside the measuring tube, compact, lightweight and low energy consumption
- Conforms to hygienic requirements, CIP/SIP compatible
- Ideal for liquids with low or no conductivity
- Digital communication, parameterisation via Communicator, display
- Optional: ATEX/IECEx certification, II 3G/D

Product variants described in the data sheet may differ from the product presentation and description.

Type description

The Type 8098 flowmeter is part of the FLOWave product range. It is based on SAW (Surface Acoustic Waves) technology and is mainly designed for applications with the highest hygienic demands. This is achieved by using:
- suitable stainless steel materials
- a measuring tube free of any wetted parts except for the actual tube
- the ideal outer hygienic design.

FLOWave offers a range of integrated functions, including the advantages of flexibility, ease of cleaning, compact dimensions, lightweight, easy installation and handling, and is compliant with numerous standards.
Optimal measurement results can be achieved with homogeneous liquids, free of air and solid particles. For liquids with high viscosity, an integrated viscosity compensation can be activated. Gas and steam cannot be measured; however, their flow does not have any negative effect on the device or its operation and other liquids flowing through afterwards are measured correctly as before.
Beside volume flow, a density measurement optional feature is available. With this option, the mass flow is calculated based on volume flow and density measurements.
Special functions derived from further process values (differentiation factor (DF), acoustic transmission factor, concentration) offer additional information about the particular liquid in use (for details, see chapter **“7.2. Special functions” on page 30**).

1. General technical data

1.1. About the device

The flowmeter Type 8098 consists of:

- either a flow sensor Type S097 and a transmitter Type SE98 (variant FLOWave L flowmeter), which is available with or without industrial communication (the FLOWave L variant with industrial communication, recognisable by the two M12 female connectors and the M12 male connector, is called the Ethernet version.)

- or a flow sensor Type S097 and a transmitter Type SE91 (variant FLOWave S flowmeter)

1.2. All versions

Note:

- The following data applies to all versions.
- In the following table, the term “full scale” refers to full scale of volume flow rate.

Product properties	
Material	
Please make sure the device materials are compatible with the fluid you are using. Detailed information can be found in chapter “3.1. Chemical Resistance Chart – Bürkert resistApp” on page 16. Detailed information on the materials can be found in chapter “3.2. Material specifications” on page 17.	
Non wetted parts	
Sensor housing	• For sensor with process connection ≤ DN 50/2": stainless steel 304/1.4301 • For sensor with process connection > DN 50/2": stainless steel 316L/1.4435
Wetted parts	
Measurement tube and process connection	Stainless steel 316L/1.4435 with low delta ferrite content
Surface quality	
Measurement tube (inner surface)	• Ra < 0.8 µm (30 µin.) or • Ra < 0.4 µm (15 µin.) (electro-polished) according to ISO 4288
Dimensions	Detailed information can be found in chapter “4. Dimensions” on page 20.

Volume flow rate measurement	0…1.7 m³/h up to 0…200 m³/h Detailed information can be found in chapter "10.5. Ordering chart FLOWave L flowmeter with or without industrial communication" on page 34 or "10.6. Ordering chart FLOWave S flowmeter" on page 38.
Density measurement[1.)]	0.8…1.3 g/cm³ (inactive by default, selectable upon request)
Mass flow rate measurement[1.)]	0…1 360 kg/h up to 0…260 000 kg/h (inactive by default, selectable upon request)
Temperature measurement	-20…+140 °C (-4…+284 °F)
Special function	• Active by default, deselectable upon request. – ATF: acoustic transmission factor – DF: differentiation factor • Inactive by default, selectable upon request – Concentration Detailed information can be found in chapter "7.2. Special functions" on page 30.

Performance data

Volume flow rate measurement

Under reference conditions i.e. measuring fluid = water free from gas bubbles and solids, ambient and water temperature = 23 °C ±1 °C (73.4 °F ±1.8 F), and short refresh time, while maintaining turbulent or laminar flow profile, with the minimum inlet (40 x DN) and outlet (1 x DN) distances and the appropriate internal diameter of the pipes. Deviation from reference conditions can be adjusted through the use of a built-in correction K factor adjustment or Teach-in Procedure.

Measurement deviation	• From 10 % of full scale up to full scale: ±0.4 % of the measured value • From 1 % of full scale up to 10 % of full scale: ±0.08 % of full scale Detailed information can be found in chapter "5.2. Measurement deviation table" on page 26.
Repeatability	• From 10 % of full scale up to full scale: ±0.2 % of the measured value • From 1 % of full scale up to 10 % of full scale: ±0.04 % of full scale
Refresh time	Selectable between very short, short and long Detailed information can be found in chapter "5.3. Refresh time table" on page 26.

Density measurement As an option[1.)]

Under reference conditions i.e. measuring fluid = water free from gas bubbles and solids, ambient and water temperature = 23 °C ±1 °C (73.4 °F ±1.8 F). Deviations from reference conditions, especially exposure of the device to temperatures above 90 °C can be adjusted through the use of a built in adjustment procedure (see **user manual Type 8098** ▶).

Measurement deviation	• Standard product adjustment: ±2 % of the measured value • After Teach-In: ±1 % of the measured value (at teach-in density value)
Repeatability	±1 % of the measured value
Refresh time	Selectable between very short, short and long Detailed information can be found in chapter "5.3. Refresh time table" on page 26.

Mass flow rate measurement As an option[1.)]

Under reference conditions i.e. measuring fluid = water free from gas bubbles and solids, ambient and water temperature = 23 °C ±1 °C (73.4 °F ±1.8 F), and short refresh time, while maintaining turbulent or laminar flow profile, with the minimum inlet (40 x DN) and outlet (1 x DN) distances and the appropriate internal diameter of the pipes. Deviation from reference conditions, can be adjusted through the use of a built-in correction K factor adjustment or Teach-in Procedure.

Measurement deviation	• Standard K-factor: – From 10 % of full scale up to full scale: ±2.4 % of the measured value – From 1 % of full scale up to 10 % of full scale: ±(2 % of the measured value + 0.08 % of full scale) • After Teach-In: – From 10 % of full scale up to full scale: ±1.4 % of the measured value at teach-in density and mass flow rate values – From 1 % of full scale up to 10 % of full scale: ±(1 % of the measured value + 0.08 % of full scale) at teach-in density and mass flow rate values Detailed information can be found in chapter "5.2. Measurement deviation table" on page 26.
Repeatability	• From 10 % of full scale up to full scale: ±1.2 % of the measured value • From 1 % of full scale up to 10 % of full scale: ±(1 % of the measured value + 0.04 % of full scale)
Refresh time	Selectable between very short, short and long Detailed information can be found in chapter "5.3. Refresh time table" on page 26.

Temperature measurement	
Measurement deviation	• For T° ≤ 100 °C (+212 °F): ±1 °C (+1.8 °F) • For 100 °C (+212 °F) < T° < 140 °C (+284 °F): ±1.5 %
Refresh time	Approx. 0.1 s
Electrical data	
Operating voltage	• 12…35 V DC filtered and regulated • Tolerance: ±10 % • Connection to main supply: permanent (through external SELV (Safety Extra Low Voltage) and LPS (Limited Power Source) power supply)
Power source (not supplied)	Limited power source according to UL/EN 60950-1 standards or limited energy circuit according to UL/EN 61010-1 §9.4
DC reverse polarity protection	Yes
Voltage supply cable	
For cable gland	• 0.2…1.5 mm² cross-section • In nickel plated brass: – Cable with maximum operating temperature greater than +80 °C (+176 °F) – 5…14 mm diameter, shielded cable • In stainless steel: – Cable with maximum operating temperature greater than +80 °C (+176 °F) – 6…12 mm diameter, shielded cable
For 5 pin M12 male fixed connector (A-coded)	• Cable with maximum operating temperature greater than +80 °C (+176 °F) • 3…6.5 mm diameter, shielded cable, • 0.75 mm² cross-section to connect to 5 pin M12 female connector (A-coded, not supplied)
For 4 pin M12 female fixed connector (D-coded)	• Cable with maximum operating temperature greater than +80 °C (+176 °F) • 5e / CAT-5 min. category, 100 m max. length, shielded conductor with minimum STP
Medium data	
Fluid	Non-dangerous liquids complying with article 4, §1 of 2014/68/EU directive. Detailed information can be found in chapter "2.3. Pressure equipment directive" on page 16. By default the FLOWave flowmeter is set for a fluid with a sound velocity[2.)] • between 1000 m/s and 2000 m/s for process connection DN 08, ⅜" and ½" • between 800 m/s and 2300 m/s for process connection DN ≥ 15 or ≥ ¾"
Fluid temperature	• -20…+110 °C (-4…+230 °F). The maximum fluid temperature can be restricted by the ambient operating temperature. • Max. conditions for sterilisation process: up to +140 °C (+284 °F) (+130 °C (+266 °F) for ATEX/IECEx version) for max. 60 min • Maximum temperature gradient: 10 °C/s (18 °F/s) (measured by the integrated sensor on the device)

1.3. FLOWave L flowmeter

The FLOWave L flowmeter is available in four versions of the transmitter:

- Stainless steel transmitter with nickel plated brass cable glands and M12 male connector
- Stainless steel transmitter with stainless steel cable glands and M12 male connector (full stainless steel version)
- Stainless steel transmitter with stainless steel M12 female and male connectors and industrial communication (Ethernet version)
- Stainless steel transmitter with stainless steel cable glands and M12 male connector (ATEX/IECEx version).

Output	**Only for device with 8-pin M12 connector**						
Number of outputs	2, each configurable as digital or analogue output						
Digital output	Overload information (through software diagnostics function) Transistor: • Type: NPN or PNP (wiring dependent), open collector, galvanically isolated • Operating modes: pulse (by default), On/Off, threshold, frequency (user configurable) • 0…2 kHz, 5…35 V DC, max. 700 mA, max. pulse duration: 2 s, selectable limits: – 0.0001…10 000 pulses/litre or 0.0001…9 999.99 litres/pulse – 0.0001…10 000 pulses/kg or 0.0001…9 999.99 kg/pulse[1.)] • Protected against polarity reversals of DC and overloads						
Analogue output	Open loop detection (through software diagnostics function) Current: • 4…20 mA • 3.6 mA or 22 mA to indicate an error (only if 4…20 mA scale selected); galvanically isolated • Max. loop impedance: 1300 Ω at 35 V DC, 1000 Ω at 30 V DC, 700 Ω at 24 V DC, 450 Ω at 18 V DC						
Process/Port connection & communication							
Electrical connection	• 1 × 5 pin M12 male fixed connector (A-coded) for device without output • 1 × 8 pin M12 male fixed connector (A-coded) for device with 2 outputs						

DTS 1000270652 EN Version: S Status: RL (released | freigegeben | validé) printed: 28.06.2022

Data transfer	• Device without output: external communication through büS (Bürkert system bus, CANopen protocol) • Device with 2 outputs: büS connection only to the Bürkert Communicator for configuration and software update of the device. Due to the missing CAN shield the conventional büS/ CANopen communication is not recommended.
Environment and installation	
Ambient temperature	
Operation	• -10…+70 °C (+14…+158 °F) if -20 °C (4 °F) ≤ fluid temperature ≤80 °C (176 °F) or for ATEX/IECEx version, -10…+60 °C (+14…+140 °F) if -20 °C (4 °F) ≤ fluid temperature ≤100 °C (212 °F) • At a fluid temperature >80 °C (176 °F), the maximum ambient temperature decreases linearly from 70 °C (158 °F) up to 40 °C (104 °F). This means that at a fluid temperature of 80 °C (176 °F) the ambient temperature may be a maximum of 70 °C (158 °F) and at a fluid temperature of 140 °C (284 °F) the ambient temperature may only be a maximum of 40 °C (104 °F). or for ATEX/IECEx version, at a fluid temperature >100 °C (212 °F), the maximum ambient temperature decreases linearly from 60 °C (140 °F) up to 45 °C (136 °F). This means that at a fluid temperature of 100 °C (212 °F) the ambient temperature may be a maximum of 60 °C (140 °F) and at a fluid temperature of 130 °C (266 °F) the ambient temperature may only be a maximum of 45 °C (136 °F) Detailed information can be found in chapter “5.1. Medium temperature diagram” on page 25.

2.2. Certificates

Note:

- The certificate listed below must be stated when making enquiries. This is the only way to ensure that the product complies with all required specifications.
- Not all available variant of the devices can be supplied with the certificate below.

Certificate	Description
FDA	The devices comply in their composition with the Code of Federal Regulations published by the FDA (Food and Drug Administration, USA).
EtherCAT	EtherCAT® is a registered trademark and patented technology, licensed by Beckhoff Automation GmbH

2.3. Pressure equipment directive

The device conforms to article 4, paragraph 1 of the pressure equipment directive 2014/68/EU under the following conditions:

Device used on a pipe

Note:

- The data in the table is independent of the chemical compatibility of the material and the fluid.
- PS = maximum admissible pressure, DN = nominal diameter of the pipe

Type of fluid	Conditions
Fluid group 1, article 4, paragraph 1.c.i	DN ≤ 25
Fluid group 2, article 4, paragraph 1.c.i	DN ≤ 32 or PS*DN ≤ 1000
Fluid group 1, article 4, paragraph 1.c.ii	DN ≤ 25 or PS*DN ≤ 2000
Fluid group 2, article 4, paragraph 1.c.ii	DN ≤ 200 or PS ≤ 10 or PS*DN ≤ 5000

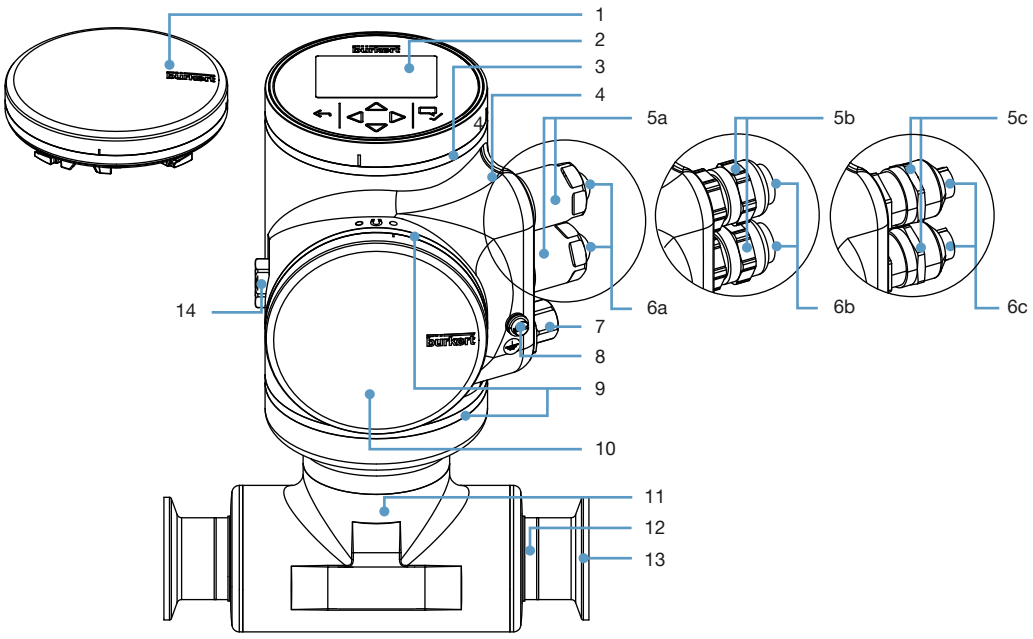
3.2. Material specifications

FLOWave L flowmeter without industrial communication

Note:
The following picture describes a device with 2 x M20 × 1.5 cable glands, 1 × 5 pin M12 male connector and clamp process connection.



No.	Description	Material
1	Blind cover	Stainless steel 304/1.4301
2	Display module	Float glass, stainless steel 304/1.4301
3	Multi-colour LED behind seal (used for e.g. to indicate the status of the product, based on the NAMUR NE 107 standard)	VMQ silicone
4	Transmitter housing	Stainless steel 304/1.4301
5	Cable gland (full stainless steel version)	Body in stainless steel 304L/1.4307 and seal in TPE (according to FDA)
6a	Cable glands	Body in nickel plated brass and seal in TPE
6b	Cable glands (ATEX/IECEx version)	Body in stainless steel 316L/1.4404 and seal in EPDM
6c	Blind plug (full stainless steel version)	PA6
7a	Blind plug	Black POM
7b	Blind plug (ATEX/IECEx version)	PA
7c	5 pin M12 male fixed connector (wired to büS) with screwed plug	• Body in stainless steel 316L/1.4404 and seal in NBR (if equipped with 6a) or in VMQ silicone (if equipped with 6c) or • Body in nickel plated brass and seal in NBR (if equipped with 6b)
8	Functional earth	Cylinder screw, washer, washer spring in stainless steel A4 and blind rivet nut in stainless steel 1.4578/A4
9	Seal	VMQ silicone
10	Blind cover	Stainless steel 304/1.4301
11	Sensor housing	For sensor with process connection: • ≤ DN 50/2": stainless steel 304/1.4301 • > DN 50/2": stainless steel 316L/1.4435
12	Sensor measurement tube	Stainless steel 316L/1.4435 with low delta ferrite content
13	Process connection (either clamp connections or flange connections)	Stainless steel 316L/1.4435 with low delta ferrite content
14	Pressure compensating element	Diaphragm in ePTFE, O-ring in silicone 60 Shore A and body in stainless steel (316L/1.4404)

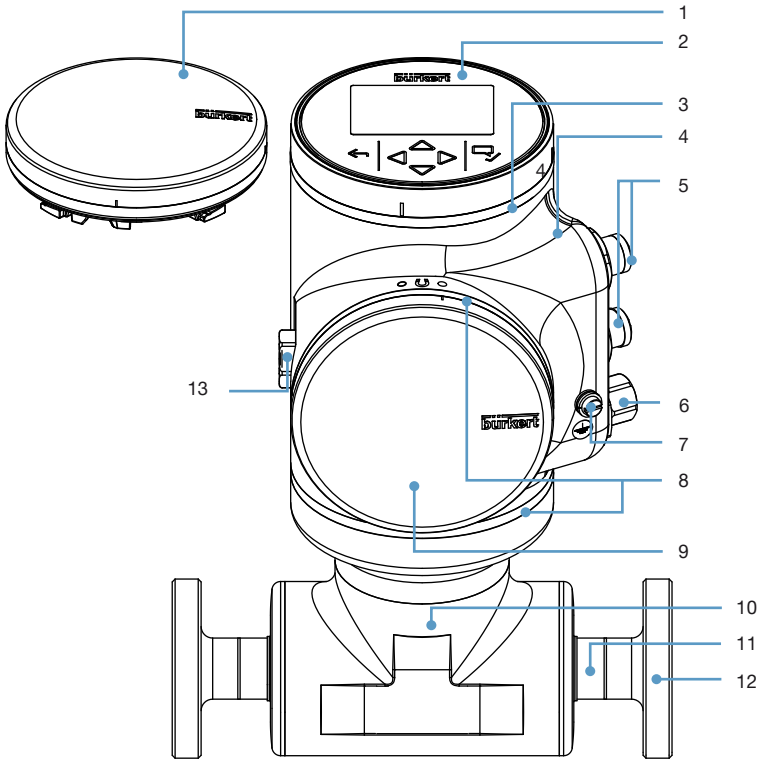
Note:
The following picture describes a device (Ethernet version) with 2 × 4 pin M12 female connectors, 1 × 5 pin M12 male connector and flange process connection.



No.	Description	Material
1	Blind cover or	Stainless steel 304/1.4301
2	Display module	Float glass, stainless steel 304/1.4301
3	Multi-colour LED behind seal (used for e.g. to indicate the status of the product, based on the NAMUR NE 107 standard)	VMQ silicone
4	Transmitter housing	Stainless steel 304/1.4301
5	4 pin M12 female fixed connectors with screwed plug	Body in stainless steel 304L/1.4307, contact support in PBT GF30 and seal in EPDM
6	5 pin M12 male fixed connector (wired to büS) with screwed plug	Body in stainless steel 316L/1.4404 and seal in NBR
7	Functional earth	Cylinder screw, washer, washer spring: stainless steel A4 blind rivet nut: stainless steel 1.4578/A4
8	Blind cover	VMQ silicone
9	Seal	Stainless steel 304/1.4301
10	Sensor housing	Stainless steel 304/1.4301[1.)]
11	Sensor measurement tube	Stainless steel 316L/1.4435 with low delta ferrite content
12	Process connection (either clamp connections or flange connections)	Stainless steel 316L/1.4435 with low delta ferrite content
13	Pressure compensating element	Diaphragm: ePTFE; support: polyester; O-ring: silicone 60 Shore A; body: stainless steel (316L/1.4404)

1.) If instead of flange connections there are clamp connections according to DIN 32676 or threaded connections according to DIN 11851, the material of the sensor housing for DN > 50 is stainless steel 316L/1.4435.

6. Product installation

6.1. Installation notes

Note:
The flowmeter is not designed for gas and steam flow measurement. However, their flow does not have any negative effect on the device or its operation. Other liquids flowing through again afterwards are measured correctly as before.

The factory calibration of the FLOWave is done under reference conditions with inlet (40 x DN) and outlet (1 x DN) distances and the appropriate internal diameter of the pipes.
Deviation from reference conditions can be easily adjusted through the use of a built-in K factor adjustment or Teach in procedure. We can support you if necessary, please do not hesitate to contact us.
The device can be installed into either horizontal, oblique or vertical pipes. But an installation on a vertical pipe will be better to prevent air or gas bubbles inside the measurement area. **For proper operation always ensure a totally filled measurement tube.**

Conformity to 3A and EHEDG requires an angle of at least 5° (for SMS or series A connections) or 3° (all others available connections) against horizontal to ensure complete draining however this not necessary for proper operation of the FLOWave.

The suitable pipe size can be selected using the diagram for selecting the nominal diameter of the pipe. See chapter "6.2. Selection of the nominal diameter" on page 27.

6.2. Selection of the nominal diameter

The graph is used to determine the DN of the pipe and the flowmeter appropriate to the application, according to the fluid velocity and the flow rate. On the chart, the intersection of flow rate and flow velocity gives the appropriate diameter.

Example 1:
Flowmeter with process connection according to DIN 32676 series B (pipe ISO 1127) or DIN 11864-2 form A series B (pipe ISO 1127)

- Flow: 10 m³/h
- Optimal flow rate: 1…3 m/s

Result: Select a pipe size of DN 40 or DN 50

Example 2:
Flowmeter with process connection according to DIN 32676 series A (pipe DIN 11850) or DIN 11864-2 series A (pipe DIN 11850)

- Flow: 10 m³/h
- Optimal flow rate: 1…3 m/s

Result: Select a pipe size of DN 40 or DN 50

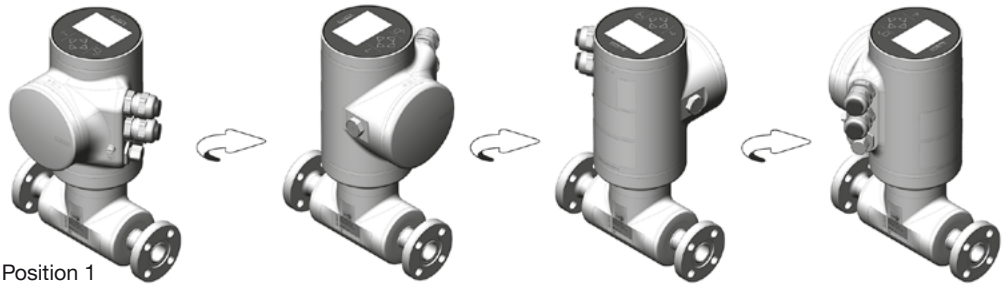
6.3. Mounting options

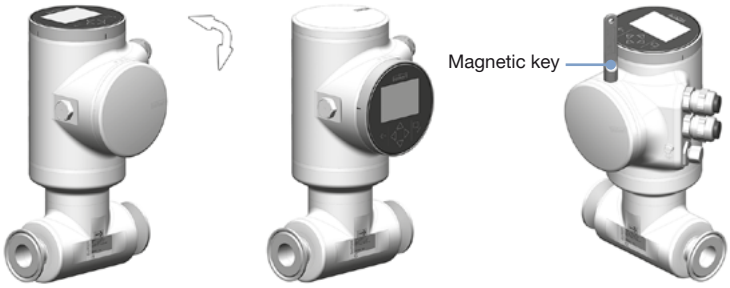
FLOWave L flowmeter

The product is delivered as described in position 1 in the picture below. The position of the transmitter can be changed in 90° steps. The position of the display module and the blind cover can also be changed in steps of 90°both on the top of the unit and on the front face.



Position 1

For safety reasons the display module and blind cover on the top or front are locked. The display module and blind cover can be unlocked with a magnetic key which is included in the delivery of each device.



FLOWave S flowmeter

The product is delivered as described in position 1 in the picture below. The position of the transmitter can be changed in 90° steps. For safety reasons the transmitter is locked. The transmitter can be unlocked with a magnetic key which is included in the delivery of each device.

7. Product operation

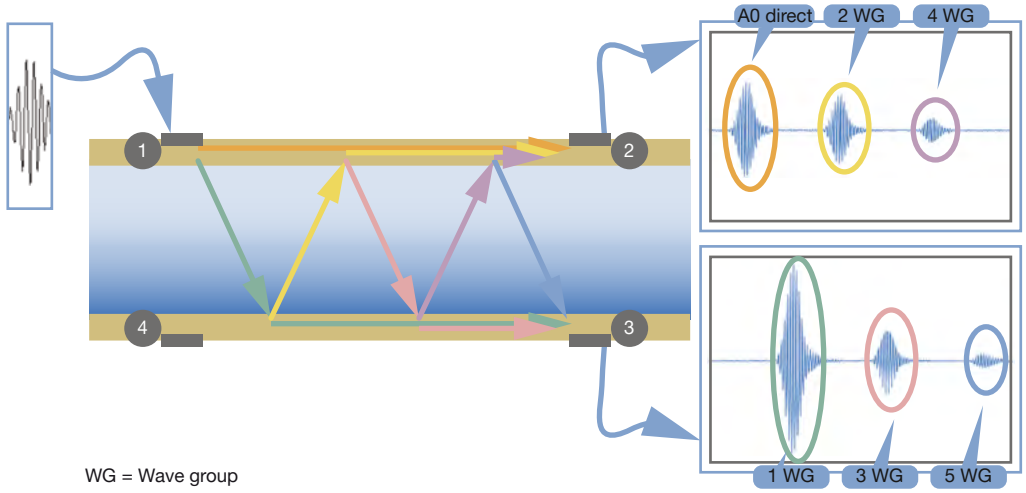
7.1. Measuring principle

The technology used is based on SAW (Surface Acoustic Waves). The type of wave propagation is similar to what happens when an earthquake occurs in nature.

In the case of FLOWave it is a miniaturized signal, not running on the surface of the earth but on a measurement tube. FLOWave uses so called interdigital transducers which are placed on flattened areas of the tube surface. Each one acts as emitter as well as receiver. Two of them (nos. 1 and 4) emit forward, in the direction of the liquid flow, the others (nos. 2 and 3) backwards, i.e. in the opposite direction to the direction of flow. The propagation time is measured from emitter to receiver. The difference between the forward and backward propagation time of the waves is proportional to the volume flow rate.

The high performance measurement is achieved by the following aspects:

- Each emitter sends multiple signals that are received on two other receivers
- The results are based on the reception of the signals that pass through the liquid one or more times.
- Several measurements can be performed based on the collected information. Many properties of the liquid can be derived, including the flow velocity, the fluid density, the fraction of the transmitted signal (“acoustic transmission factor”), and the so-called “differentiation factor” (see following), as well as information about the presence of gas bubbles or solid parts.
- Mass flow is calculated from fluid density and volume flow.
- Mass flow and density measurements are an option on standard FLOWave flowmeters, which requires adjustment and calibration during manufacture. It is therefore necessary to specify whether or not the device is to be equipped with these features when ordering the device.



WG = Wave group

This figure shows, as an example, the reception signals when interdigital transducer 1 is transmitting.
The emitter excitation produces the SAW with a frequency of more than 1 MHz.

As a result of the emission of these waves, the following effects occur:

- A wave propagates along the surface of the tube (see orange line).
- A wave is emitted (see green line) and passes through the liquid towards the opposite side of the tube at a certain angle, which depends mainly on the speed of propagation on the surface of the tube and in the liquid.
- Upon reaching the opposite side of the tube, two effects take place.
  - A wave is triggered in the tube and propagates (see green line) to receiver 3
  - A wave is triggered in the liquid (see yellow line) and passes through it again to the opposite wall of the tube. The analysis of the transmitted and received waves allows deriving the process values (velocity, density, flow rates).

These effects are repeated and thus generate the many signals received, which are differentiated in the image with different colours.

7.2. Special functions

Note:
DF, ATF, concentration, density and mass flow features must be selected upon initial order of device.

For the detection of gas bubbles and solid particles the device (from firmware version 01.05.00) includes a so called “acoustic transmission factor (ATF)” with a measurement range of 5…120 %, whose value is constantly recorded and directly influenced by the presence of gas bubbles and solid particles.
A “differentiation factor (DF)”, with a measuring range of 0.8…1.3, is available for the detection and differentiation of liquids. This continuously measured value, which uses water as a reference fluid, is temperature-compensated and so its value is representative in a tight value range for each liquid. The changes in value of this process measurement enable differentiation between different liquids.

Before SW version 05.00.00, the differentiation factor was named density factor. As the density option has been added, the name has been changed to avoid confusion.

One or two concentration measurements, based on fluid acoustic properties, are available as an option.
If a “concentration” option is ordered, the product will be delivered by default with the following concentration measurements, depending of the activated options:

Measured concentration		**Range of concentration**	**Range of temperature**	**Option needed**
Quantity of	**In mixture consisting of**			
Saccharose	Water + saccharose	0…70 °Brix	4…90 °C	DF + concentration 1
Ethanol	Ethanol + water	40…100 % w/w[1.)] (mass ratio)	10…70 °C	DF + concentration 1
Saccharose	Ethanol + water + saccharose	Saccharose: 0…15 °Brix Ethanol: 0…15 % w/w[1.)] (mass ratio)	4…40 °C	DF + density + concentration 1
Ethanol	Ethanol + water + saccharose	Saccharose: 0…15 °Brix Ethanol: 0…15 % w/w[1.)] (mass ratio)	4…40 °C	DF + density + concentration 1

1.) w/w = weight per weight

To be able to monitor two concentrations simultaneously, options concentration 1 and concentration 2 must be activated.

8. Product design and assembly

8.1. Product assembly

The 8098 flowmeter consists of a S097 flow sensor and a SE98 transmitter (FLOWave L flowmeter) or SE91 transmitter (FLOWave S flowmeter).

The flow sensor includes the measurement tube equipped with interdigital transducers, the sensor housing and the process connections in accordance to the standards ISO, ASME BPE, DIN, SMS. At present the sensor size ranges from DN 08 to DN 80 or from ⅜" to 3".

The FLOWave L flowmeter is available with or without display. The high resolution display includes a capacitive working keypad for all interactive user actions, guided by a user friendly menu system. The output signals include one analogue output and one digital output; while a third output signal can be switched between analogue and digital through parametrisation. Electrical connection is done on push-in connectors via two cable glands and/or one M12 connector.

The FLOWave S flowmeter is only available without display. The electrical connection is made via an M12 connector.

10.2. Recommendation regarding product selection

Note:

- The installation of the flowmeter in a pipe requires the use of counter-connection, seals, fixing elements, etc. depending on the used norm.
- The drawings show the installation with a FLOWave L variant of the flow meter. The installation is also valid for the FLOWave S variant.

For instance with middle-sized devices:

Connection	Description
	**With clamp according to DIN 32676 series A** To insert a FLOWave DN 40 with clamps according to DIN 32676 series A (with Ra <0.8 µm) to a pipe according to DIN 11866 series A (DIN 11850), the **correct adapters to be selected and separately ordered** are for instance • 2 x **BBS-25** clamp ferrules, article no. 747237, see **data sheet Type BBS-25** ▶ for more information • 2 x the appropriate seals (not provided) • 2 x the corresponding clamps, article no. 731164

Certification	
Included in delivery	☐ FDA certificate (included in delivery)
	☐ Inspection certificate 3.1 acc. to EN 10204 (included in delivery)
	☐ Certification of compliance ASME BPE (included in delivery)
	☐ EHEDG - TYPE EL-CLASS I[1.)] (included in delivery)
	☐ 3A, 28-06 (included in delivery)
	☐ Fluidic test report (test regarding volumetric flow rate or volume and mass flow rates, if density and mass flow rate option chosen)
On order	☐ Calibration certificate for volume flow in water (2x3 points) (article no. 568114)
	☐ Calibration certificate for volume flow, mass flow, density in water (2x3 points) (article no. 574229)
	☐ USP class VI declaration
	☐ ECR1935/2004 declaration
	☐ CRN 0C21751 declaration
	☐ Test report 2.2 acc. to EN 10204 (article no. 803722)
	☐ Certification of conformity for the surface quality DIN 4762; EN ISO 4287; EN ISO 4288 (article no. 804175)
	☐ Certification of conformity for passivation and electropolishing processes (article no. 444900)
	☐ MTBF (Mean Time Between Failures) manufacturer declaration

1.) The EHEDG compliance is only valid if used in combination with gaskets from Combifit International B.V, Kieselmann GmbH, Germany or Siersema Komponenten Service (S.K.S.) B.V. according to the device variant.
